

KOMATSU

MATERE

COMPANY PROFILE

Komatsu Materie was founded in 1943 as a textile processing manufacturer in Komatsu City, Ishikawa Prefecture. Since then, we have leveraged our sophisticated and unique dyeing and high-order post-processing technologies to realize high-level workmanship in both fashion and sports brands not only in Japan but worldwide. Our field of business extends beyond textiles to health, civil engineering, and vehicles, diversifying even further into multiple other areas such as electronics and the environment. Inspired by our slogan "Art in Technology," we are driven to combine the craftsmanship and sensibility we have refined so far with our core of advanced technologies, to take our manufacturing to even more superb levels, while also opening up new markets. As a manufacturer of chemical materials constantly generating new and original wares, we will continue to supply our customers with wonder and excitement.

## Environment-friendly regional communities connected via materials

Through all our corporate activities and under the SDGs, we are earnestly engaged with global issues humanity is faced with, such as global warming, declining resources, or loss of biodiversity.

Our every effort is directed to balancing prosperity for human society with the protection of the environment, to conserve a healthy global environment.

In 1999, we established the Komatsu Seiren (our former company name) Environmental Management Declaration to position global environment preservation as our management priority. Subsequently, in 2020, we reorganized our policies into the five goals of the Komatsu Matere Sustainability Vision in order to realize a future sustainable society.

We will endeavor to work with integrity to realize a “global environment that allows for the coexistence of people, fibers and nature”.

### Komatsu Matere Sustainability Vision

Climate change countermeasures

Company-wide energy saving efforts for the global environment

We will promote energy saving and improve production efficiency at our plants, and develop products that require less production energy than our previous products.

Contribution to the creation of a recycling-oriented society

Sustained efforts for a recycling-oriented society

We will reduce water use, waste disposal and hazardous chemical emissions to obtain international environmental accreditation.

Creating inspiration for people

Creation of an eco-society through new value

We will increase our mateReco brand products to contribute to the reduction of environmental burden through various methods such as energy saving, biomaterials, hazardous chemical reduction and antiviral treatment.

Disaster prevention and mitigation efforts

Technological development for people's safety

We will help construct a safe and secure society with our carbon fibers, seismic reinforcement materials, water-retaining and water-permeable pavement blocks and antiviral treatment materials.

Community contribution and employee growth

A company required by local communities

We will endeavor to revitalize local industries and solve regional problems. We also declare to become a health-conscious company and work proactively to improve our employees' health.

Sustainable brand

mateReco®

Mate Reco is the general brand name of Komatsu Matere Group's sustainable fabrics and products. We select raw materials including recycled yarns and bio-yarns (of natural origin) and use processing technologies that reduce water and CO<sub>2</sub> emissions. We contribute to the realization of an environmentally friendly society.

The Research and Development Center, the core of our research and development

## Creation of new value through all employees' unified efforts in research and development, manufacturing and sales

We produce various products from fashion textiles to construction materials, and they are widely distributed in global markets. Our driving force is the passion for creating new value from scratch, through research and development.

When a material is developed, it requires many people's efforts and a long process from research to completion. Our advanced research and development center and production sections are unified to create innovative products.

We have expanded textile possibilities, based on our original ideas which are free from stereotypes. We will predict future needs and work to make people's lives more comfortable, with the aim to bring surprise and sensation to the world.

## Creation of originality in each process

### TECHNOLOGY RESEARCH

#### A core for innovation

The Technology Labo Research and Development Center conducts fundamental research and develops new materials and environment-friendly facilities.

### MATERIAL DEVELOPMENT

#### Creativity from expert skills

Our advanced technology creates products with innumerable possibilities multiplied through the combination of various ideas.

### PRODUCTION CONTROL

#### Application of technologies developed since our foundation

We manufacture highly sensible and functional products in a wide variety of fields such as interior design, car interior, medicine and welfare, and electricity.

### ENGINEERING

#### Advanced technology facilitating the progress of society

We correspond to constant technological changes. Our high-level skills are used in many areas of our business such as the design, development and modification of our production facilities.

#### We have started developing new materials in collaboration with a bio venture company

We aim to develop new sustainable materials for our main raw materials, using artificial protein materials with no petroleum or animal products.

#### We are working to promote agriculture in the Noto Peninsula

We are improving the red soil of the Noto Peninsula using Greenbiz Karyu microporous ceramic in cooperation with an environmental NPO and an agricultural corporation in Noto.

## Evolving the technologies required to create a disaster-resistant society

Japan is a disaster-prone country; technology to extend the lifespan of social infrastructure is essential.

We are conducting various research and development projects with the aim of realizing a sustainable society.

In particular, our new earthquake-resistance reinforcement method using the CABKOMA Strand Rod carbon fiber composite material is a technology that allows for earthquake-resistance reinforcement work to be carried out without requiring production in factories to be stopped.

Currently, we are working with industry, academia and government to obtain official technology evaluation by 2026.

In a society with increasing uncertainty, we must move forward without fearing change.

We cooperate with local people, learn, improve our own expertise, generate new ideas, and continue to lead society with strong leadership, looking one step ahead of the times.

The No. 2 manufacturing plant was reinforced against earthquakes using CABKOMA

### Seismic reinforcement is possible without stopping factory operations

Heavy machinery to carry bracing materials, heavy scaffolding, and the removal of factory equipment are no longer necessary. Construction can be done with minimal scaffolding, reducing construction costs. If you are worried about the difficulty of implementing earthquake reinforcement, this will make it easier than you think.

#### Construction example

Our manufacturing plant (steel frame construction, floor area approximately 7,000 m<sup>2</sup>) was constructed in 1968. Since our company operates 24 hours a day on weekdays, the construction was completed on weekends. It took approximately seven months by repeatedly assembling scaffolding, installing horizontal bracing materials, and dismantling the scaffolding on weekends when not in operation.

### Thermoplastic carbon fiber composite material that combines traditional industry and modern technology

This is a strand material that combines Japan's traditional braiding technology with modern carbon fiber technology. The outer layer is covered with synthetic or inorganic fibers and impregnated with thermoplastic resin. It is characterized by its narrow width and high tensile strength.

FASHION

Materials crafted with rich originality support cutting edge fashion

Clothing fabrics are the core business of Komatsu Matere, and among these fashion fabrics are our central focus. Our products are a step beyond the ever-changing trends, created with close coordination between our sales, R&D, and production divisions, to create a vast and diverse range of types. Our fabrics are full of fashionableness and creativity, winning them a strong reputation from name European luxury brands.

# La Collezione komatsu

With a strong desire to keep and enhance the relationship with every customer, we are going to establish our digital fabric showroom, "La Collezione Komatsu".

You can see us and our fabrics 365 days in a year.

High quality, high function and other additional properties for comfort and pleasure in this age

Sportswear and sport uniforms directly influence players' performance. In recent years, they are required to be not only comfortable and easy to move in but also fashionable. We add all the required properties such as comfort and functionality, according to the material. Our proud dyeing skills and high-level postprocessing technologies are expanding the possibilities of clothing in accordance with the new age.

FUNCTION

SAFETY

Chemical materials for safety and security

Our technology is also applied to materials used in places that require safety and peace of mind. Products used in areas that influence quality of life, such as health, are required to have invisible yet secure functions. We never stop seeking materials with functions that can be exercised in the harshest of environments.

KOMATSU brand creativity, supporting a wide range of industries

Our long-established technologies have been applied to products in many industries such as architecture and civil engineering, automobiles, electronics, medicine and welfare, hygiene and agriculture. Demand for products with improved functions is increasing in many fields such as paving, seismic reinforcement of cultural assets and farm soil improvement. Our pioneering spirit, unbounded by textile stereotypes, is creating new standards in society.

## Bringing back a sense of wonder and excitement to people

What we desire to achieve through our corporate activities is to provide people with a sense of excitement via our workmanship, to contribute to creating enriched lifestyles, and to develop together with our employees.

To make this possible, we need to spare no effort in innovation that goes beyond past ideas or commonly accepted ways of thinking.

Based on the three principles given here, we will focus the strength of all our group employees, with the goal of being a chemical material manufacturer that continues to create new materials packed with wonder and excitement.

Every element will lead to a better tomorrow, we believe.

[Three corporate philosophy principles]

- |                                                                                                                                                                    |                                                                                                                                                                                                                                          |                                                                                                               |

Our corporate slogan: "Art in Technology"

### Changing the world with "Art in Technology"

Our corporate slogan integrates two basic concepts: "A fusion of technology and sensibility" as advocated at our 50th founding anniversary, and our previous statement of "To industrialize art." The slogan declares that we are an innovative company with proven technologies in fields extending beyond textiles to construction, civil engineering, vehicles, and many other areas.

Art in Technology  
**komatsumateRe**

What our brand logo represents

### Aiming to become a global brand

Our logo represents Mt. Fuji, a symbol of Japan. It indicates our determination to compete in the global market through our leading technology and quality. This logo is shown on the tags of end products using our materials, as a symbol of the reliable brand "Komatsu Matere".

# HISTORY

## 40's

---

1943    Founded Komatsu Orimono Seiren Senko Co., Ltd. in Komatsu City

## 50's

---

1958    Start of nylon fabric processing

## 60's

---

1960    Start of polyester filament fabric processing  
1961    Established the Osaka Office  
1962    Opened Tokyo Office  
1963    Company name changed to Komatsu Seiren Co., Ltd.  
          Constructed Neagari No.1 Plant  
1968    Completed head office building and Neagari No. 2 Plant  
          Moved the head office to Nomi City (former Neagari-machi, Nomi-gun)

## 70's

---

1970    Listed on the second section of the Osaka Stock Exchange Entered the film fabric business  
1973    Started the independent planning, production and sales of products  
1974    Completed Neagari No. 3 Plant  
1978    Abandonment of the start of continuous denier reduction

## 80's

---

1986    Completion and operaiton of in-house power plant  
1989    Constructed Neagari No.5 Plant

## 90's

---

1990    Constructed Mikawa Plant for short-fiber fabrics  
1991    Completion of R&D Center  
          Establishment of Komatsu Interlink  
1999    Formulated the "Komatsu Seiren Environmental Management Declaration"

## 00's

---

2001    Establishment of Shanghai Office  
2003    Exhibited products for the first time at Premiere Vision, the world's premier fabric trade show  
2004    Opening of Komatsu Seiren (Suzhou) Trading Co., Ltd.  
          Partnership with Tintoria Emiliana S.R.L on product dyeing  
2007    Compleiton of LNG satellite at Mikawa Plant  
2008    Decision to construct No. 2 LNG satellite at Head Office Plant

## 10's

---

2013    Established Komaxon Co., Ltd.  
          Awarded Japan's first "PV award Grand Prize" at Premiere Vision  
          Comprehensive partnership with Limonta S.p.A  
2015    Completion of fa-bo, the world's first seismically reinforced structure using carbon fibers  
2017    30th consecutive appearance at Premiere Vision  
2018    Company name changed to Komatsu Matero Co., Ltd.

## 20's

---

2020    Established Interlink Kanazawa Co., Ltd.  
          Drew up the Komatsu Matero Sustainability vision  
2021    Opened the Mono-bo factory shop next to our head office  
2022    Established the "mateReco" collective brand for environmentally friendly materials  
2023    Opened the Matero shop in Higashiyama, Kanazawa  
          Opened the flagship showroom "Aoyama Showroom" in Minami-aoyama, Tokyo.
